

# DATA SHEET – WILMHURST GENERATOR

## FEATURES:

- ECONOMICAL
- POWERFUL
- EASY TO USE
- EFFICIENT
- READY FOR USE
- LONG SERVICE LIFE
- CLASSIC DESIGN

THE Wilmhurst GENERATOR, from Elk Industries, is a Classic Design Laboratory Grade Instrument. It is Used to demonstrate and Illustrate the Use of Static electricity to Generate Useful amounts of High Voltage electricity, at “substantial” Currents.

The Original UNITS of this type design, made using somewhat different Materials, were first Made in the 1870's by the Inventor, Wilmhurst. It is Amazing, to Us, that such Meaningful work has essentially remained in Obscurity. While some may have experimental Applications for these Units, there are many Practical Uses for them. The High Voltage Output is  $> 50,000$  Volts.

Soon, we plan to Offer Motorized Versions of these, or Improved Design Units. They will be Solar Powered, if desired, as well.
